Nuclear power plants in California

Currently operating **Closed**

Source: California Energy Commission

San Onofre has been closed for good, due to leaking cooling tubes of unknown cause.

Operating nuclear power plants in California are **Diablo Canyon**, near San Luis Obispo (above) and San Onofre, about midway between Los Angeles and San Diego.

Lawrence Livermore National Laboratory is located off Vasco Road, near Interstate-580, in Livermore, California, about 48 miles East of San Francisco (aerial view above).
Site 300, a ten-square-mile remote explosive/experiment testing site, is situated 18 miles to the east.
Lawrence Livermore has an annual budget of about \$1.6 billion and a staff of over 8,000 University of California employees.
